

The Bext360 team is looking for a dedicated and enthusiastic engineer with a passion for solving complex problems with limited resources to join us in revolutionizing supply chain traceability.

## **About Us**

Bext360 is an early-stage start-up company whose mission is to utilize technology to improve the global supply chain for agricultural products. First up, the world's first blockchain-traced coffee. What's more - we have invited consumers to have insights into the entire journey of their cup of joe – starting with the farmer who harvested the coffee cherries, all the way to its quality rating and how revenue earned has helped that farmer's surrounding community. Our team of trail blazers is looking for an individual who shares in our desire to change the way companies expose their supply chain to consumers, in all industries. We believe in working with grit – you'll be an integral part of a company that is building technologies that are brand new to this industry.

## **About You**

You love to use innovative products, and view software as just one of the tools in your toolbox. You can analyze from a customer's perspective to see a product through their eyes. You have experience in wearing many hats and are eager to learn new skills as needed.

## **Responsibilities**

- Work within an Agile development process
- Collaborate with our development team
- Analyze qualitative and quantitative data to understand identify customer needs
- Assist with wireframes and rapid prototyping
- Conduct consumer research
- Incorporate customer feedback into new features
- Document product requirements
- Project Management

## **Requirements**

- Excellent communication skills
- User experience design / Human computer interaction experience
- Ability to lead and motivate team members
- Strong organizational skills
- Capacity to adapt to bext360's fast-paced and dynamic culture
- Proficient in Spanish or other languages is a huge plus

**To apply please e-mail resume and cover letter to [tessa@bext360.com](mailto:tessa@bext360.com)**

## Who We Are

Bext360's vision is to improve the global supply chain for agricultural products, using a novel combination of blockchain technology and machine vision that allows for traceability and transparency where it's desperately needed.

Our first initiative was to introduce the world's first blockchain traced coffee. Using our platform, farmers and consumers alike are invited along for the entire journey of their goods. We start reporting on the farmer who harvested the product, all the way to its quality rating, and how a consumer's purchase has impact on its source community.

## How It Works

The bext360 system tracks and blockchains goods at every node in the supply chain, in order to provide transparency on a shared ledger that is updated and validated in real time.

Physical assets are immediately represented as tokens and stored in the blockchain in order to facilitate payments, yield smart contracts, and provide traceability to reveal where the asset currently resides in the supply chain.

Blockchain provides the immutable record and **proof that your data has not been altered**. Utilizing machine vision and artificial intelligence (AI), we help to ensure **proof of origin** and sort high-quality products directly from the source.

We deliver our solutions through a Software-as-a-Service (SaaS) business model. Customers can view and analyze traceable data at every node in the supply chain. Our RESTful API's allow wholesalers and retailers to embed the technology into their own websites, marketing, point-of-sale systems, and supply chain management tools.
